

Title:

Registration of Supplementary Substances in the Czech Republic

Author:

Jana Meitská, Central Institute for Supervising and Testing in Agriculture, Czech Republic

Abstract:

Two ways of placing supplementary substances on the Czech market:

- 1) **Mutual Recognition** (according to European legislation - Regulation (EC) No 764/2008)
 - easier, quicker and free of charge.

In this case we need:

- a copy of certificate, registration etc. - confessing that this product is legally placed on the market of a member state of EU. If there is no such a certificate etc., we can accept statement of state authority that the product is legally marketed in a member state of EU
- original label + Czech label
- compliance with limit values of heavy metals in the Czech Republic is also essential

Responsible person for mutual recognition is Mr Jiří Hrma, jiri.hrma@ukzuz.cz

- 2) **Registration** of supplementary substances (according to Law No. 156/1998 Coll., on fertilizers) of the product consists of:
 - application form for registration (charged by 3000 CZK) – here you can download the application form <http://eagri.cz/public/web/en/ukzuz/portal/fertilisers-and-soil/registry/>
 - proposal of Czech version of label (in digital form – doc. formate)
 - sample presentation - at least 0,5 kg (if analysed in the Czech lab) or analysis in an accredited laboratory
 - presentation of Safety data sheet (if appropriate), simple description of your product production, generally - all available documents associated with the product

If all necessary documents are submitted and analysis are satisfactory then the decision on registration can be issued. Time limit of the procedure for this kind of product is up to 6 months. Validity of registration is for 5 years and can be prolonged. All documents are issued in Czech.

Responsible person for registration of supplementary substances is Ms Jana Meitská, jana.meitska@ukzuz.cz
