Deadline for manuscript
submissions:

30 September 2020

Message from the Guest Editor

Cells and cell division have fascinated biologists for more than a century, and regulation of the cell cycle has been shown to play an important role in a wide range of biological phenomena, including cancerogenesis, DNA damage response, sexual reproduction and other activities. Algae were amongst the first organisms used as cell cycle regulation models, but these studies have, so far, been limited to only a handful of species. In this regard, different species of algae have quite specific regulatory mechanisms due to a wide variety of cell reproductive patterns. These cell division patterns vary from simple binary fission, present in the majority of other organisms, to a highly specific process of multiple fission, capable of producing more than 1000 cells within a single mother cell. In this Special Issue, we seek your contributions in the form of reviews, original research articles, or shorter “perspective” articles on any aspects of the cell cycle regulation within the widely defined group of algae. We welcome studies covering already established model organisms, but also encourage articles characterizing novel or less well characterized organisms.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Biomolecules is a multidisciplinary open-access journal that reports on all aspects of research related to biogenic substances, from small molecules to complex polymers. We invite manuscripts of high scientific quality that pertain to the diverse aspects relevant to organic molecules, irrespective of the biological question or methodology. We aim for a competent, fair peer review and rapid publication. Please look at some of the exciting work that has been published in *Biomolecules* so far. We would be delighted to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: Indexed in the Science Citation Index Expanded (SCIE - Web of Science) and in **Scopus**. Citations available in **MEDLINE** (PubMed), full-text archived in PubMed Central.

CiteScore (2018 Scopus data): **5.72**, ranking 33/407 (Q1) in 'Biochemistry' and 44/375 (Q1) in 'Molecular Biology'.
